

T&A – Truck Feature – Infinity

As part of the increasingly-respected Infinity tyre range, Infinity offer both light and heavy radial truck tyres.

The light truck radial range – INF F865, INF D925 and INFA902 – have the following principal features:

- Greater directional ability
- Excellent resistance to irregular wear
- Protection against external penetration
- Low profile trailer fitment
- Excellent cost per mile / km
- Uniform grip

The light truck radial range is available in 15 sizes.

The heavy truck radial range is available across over 20 patterns and over 40 sizes.

Tyres mounted on wheel sets loaded on pallets are now available to distributors direct from the factory in most Infinity TBR sizes. These are very useful for Infinity distributors to supply to OE customers or to anyone who wants a complete tyre and wheel unit.

Both the light and heavy ranges are retreadable and Bandag have issued the following official certification:

“In conjunction with Bandag and its distributors, Infinity truck tyres have received some very good reports for the quality of the casings which have recently been retreaded.

Bandag believes that Infinity casings have “reasonable integrity” and that “the quality of the casing is good”. Infinity casings are fully suitable for retreading through Bandag dealers.

All the Infinity truck tyres are manufactured to International Standard under strong operational quality control systems. All Infinity Truck radial tyres have “E” markings.”
